

Vizioncore vEssentials Solution Bundles

Essential Products for Every Stage of the Virtual Lifecycle

Solution bundles from a single vendor, designed and priced for businesses of all sizes

Vizioncore vEssentials solution bundles are the most affordable and complete from a single vendor that address the natural lifecycle of VM management – Analyze, Convert, Protect, Monitor, Optimize and Automate. The two editions of vEssentials are designed and priced for businesses of all sizes.

Competitively priced, both editions of vEssentials are extremely attractive to customers because of their phenomenal value and joint performance of the combined products. Choose the edition that addresses your needs and will help you achieve new levels of productivity from your virtual infrastructure. Sale offerings include:

vEssentials – Pick-Any-Three Flexibility

Pick any set of three industry-leading virtualization management products for ultimate flexibility. Take advantage of incredible savings and create your own personalized solution bundles.

vEssentials Complete – Total VM Management

Address all six stages of VM management with the total Vizioncore solution set. Accelerate along the virtualization maturity curve with an integrated bundle of industry-leading products that harness and extend the value of the virtual platform.

Vizioncore products provide all the functionality that organizations require to understand their virtual environments, reduce costs, prevent outages, and achieve performance gains. Product offerings for the vEssentials solution bundles include:

 vFoglight Pro™	 vConverter™ DR	 vRanger Pro™	 vReplicator™	 vFoglight Pro™	 vOptimizer Pro™	 vControl™
Analyze	Convert	Protect		Monitor	Optimize	Automate
Determine workloads of VMs Ensure proper resource deployment Calculate cost of VMs	Create virtual backups of physical servers Enable near real-time DR for physical hosts	Back up and recover the entire virtual environment Minimize backup windows with Data Protection Platform Smarter backup & recovery options	Offsite replication of entire virtual machine Enable selection of individual critical VMs Replication to dissimilar hardware	Expert advice and diagnostics Graphical views Integrated analytics, capacity, and chargeback End user, application and database visibility	Reclaim excess VM storage Improve performance with 64K alignment Verify recurring savings ROI calculations in the product	Self-service VM provisioning Easy, script-driven task automation Virtualization EcoShell integration for rapid development

vControl™

Multi-Hypervisor Virtual Machine (VM) Management

- Builds and deploys VMs easily with self-service provisioning
- Provides multi-VM control for task-based administration and workflows across multiple hypervisors
- Automates manual and repetitive tasks
- Identifies infrastructure failures and restarts VMs from a single console
- Discovers hosts and VMs to reduce configuration and prevent oversights

Licensed per socket

vConverter™ DR

Conversion Solution for Disaster Recovery (DR)

- Provides cost-effective disaster recovery protection for old physical servers
- Converts servers to Citrix®, Microsoft®, Virtual Iron™ or VMware® VMs – Physical to Virtual (P2V)

Licensed per server

vFoglight Pro™

Best-in-Class Performance Monitoring for Virtual and Physical Infrastructures

- Understands the relationships and interactions of all components in the virtual infrastructure
- Determines the root cause of incidents or problems quickly
- Tracks movement of VMs and understands their resource impact
- Contains alarm storms from VMs and physical servers
- Identifies contention for resources between and within VMs
- Allocates costs for the use of infrastructure hosts or groups of hosts, both physical and virtual

Licensed per socket

vOptimizer Pro™

Award-Winning Storage Reclamation and Resizing Solution

- Schedules and executes regular VM storage optimization procedures
- Ensures that VM storage stays in pristine condition and provides optimal I/O performance
- Fixes VMs that are running out of storage
- Aligns partitions to 64K offsets to significantly improve VM performance
- Produces and distributes VM storage cost-savings reports

Licensed per socket

vRanger Pro™

Industry-Standard Backup and Recovery Solution for Virtual Environments

- Performs incremental, differential and complete image backups of VMs
- Restores an entire VM or specific files quickly
- Supports multiple VMware ESX platforms, including ESXi
- Integrates completely into VMware vCenter Server, including VCB and VMotion
- Backs up physical machines with additional Physical to Virtual – Disaster Recovery module

Licensed per socket

vReplicator™

Replication Solution to Support Disaster Recovery Strategies

- Provides delta-based offsite replication of entire VMs
- Enables selection of individual critical VMs
- Reduces costs and maintenance on destination with closed targets
- Replicates to dissimilar hardware
- Supports VMware vCenter Server and is VMotion and DRS aware

Licensed per socket
